The XTEL-5-SD-625 (Inconel) Series are high temperature extremely rugged pressure transducers which are ideal for the measurement of flow instabilities and steady pressures in gas turbine combustors and compressors. The XTEL-5-SD-625 (Inconel) uses an innovative low-pass mechanical filter to enable the measurement of low-level dynamic pressures in high pressure environments with superior

signal to noise ratios. The XTEL-5-SD-625 provides a "5th wire" output which indicates the temperature of the piezoresistive sensing element.
